                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAPALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-CAPALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-CAPALYTIC ACTIVITY: Belonges of Chitin.

SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Epidermis and gut.

DEVELOPMENTAL STAGE: High levels seen in the epidermis on day 0, but rapidly disappears and is undetected on days 1-4 of fifth instar. It reappears on day 5 and peaks on day 7 after which a rapid decline is seen. In the gut is detected on day 6 with lower levels seen on days 0, 7 and 8.

SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: Contains 1 chitin-binding type-2 domain.

CAPALTYIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages acetyl-D-glucosamine polymers of chitin.

SIMILARITY: Contains 2 fibronectin type III domains.

SIMILARITY: Belongs to chitinase class II (family 18 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N

         SEQUENCE FROM N.A.
STRAIR-Silveira;
Yang C., Zhu Y., Magee D.M., Cox R.A.;
Yang C., Zhu Y., Magee D.M., Cox R.A.;
Submitted (MAR-1996) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages
acetyl-D-glucosamine polymers of chitin.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of hydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; IPR001223; Glyco_hydro_18.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Binds to occyte zona pellucida in vivo. May pl
in the fertilization process and/or early embryonic deve
SUBCELLULAR LOCATION: Secretory granules.
TISSUE SPECIFICITY: Epithelial cells of the oviduct.
SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                     COCPO

Liu B., Ahmad W., Aronson N.N. Jr.;
"Structure of the human gene for lysosomal di-N-acetylchitobiase.";
Glycobiology 9:589-593(1999).
-!- FUNCTION: Involved in the degradation of asparagine-linked glycoproteins. Hydrolyze of N-acetyl-beta-D-glucosamine (1-4)N-acetylglucosamine chitobiose core from the reducing end of the bond, it requires prior cleavage by glycosylasparaginase.
-!- SUBCELLULAR LOCATION: Lysosomal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=92406917; PubMed=1527079; Fisher K.J., Aronson N.N. Jr.; Fisher K.J., Aronson N.N. of the cDNA sequence encoding the lysosomal "Cloning and expression of the cDNA sequence encoding the lysosomal glycosidase di-N-acetylchitoblase."; J. Biol. Chem. 267:19607-19616(1992).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. Blochem. J. 295:437-445(1993).

i- FUNCTION: Binds to occyte zona pellucida in vivo. May play a rol. in the fertilization process and/or early embryonic development. Might act as a protective secretion influencing the first steps the reproductive process necessary for the normal triggering of fertilization and early embryonic development.

i- SUBCELLULAR LOCATION: Secretory granules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Paquette )

FUNCTION: Involved in the degradation of asparagine-linked glycoproteins. Hydrolyze of N-acetyl-beta-D-glucosamine (1-acetylglucosamine chitobiose core from the reducing end of bond, it requires prior cleavage by glycosylasparaginase.

SUBCELLULAR LOCATION: Lysosomal.

SUMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                   SSUE=Liver;

Sequences AAY52510-Y52522 represent proteolytic fragments of Dermatophagoides farinae high molecular weight mite allergen pro -map) composition. The HWM-map composition was isolated from a D homogenate by gel filtration, with each fraction being analysed presence of proteins that bound to IgE present in mite-allergic

protein (HWM D. farinae ed for the ic dog

Claim 3; Page 70; 154pp; English.

Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

The HMW-map composition comprises mapA (a 109 kD protein) and mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therappeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite
                  The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein is useful for reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mite allergenic protein; immunocomplex formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 17

          This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-490, the mature form of pDerp98-509, PDerp98-490 has a molecular weight of 98 kD, comprising 490 amino acids, and has a high degree of homology with the D. farinae mature 98 kD allergeen, maps (AAY52525). Nucleic acid molecules encoding PDerp98-490 were isolated from a D. pteronyssius cDNA library by hybridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergeis via a skin test. The proteins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 17 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                     The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein acceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. An interpretation is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) or Der HMW-map protein activity associated with a clisease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 or represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                           This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-509. PDerp98-509 has a molecular weight of 98 kD, cc comprising 509 amino acids, and has a high degree of homology with the D farinae 98 kD allergen, maps (AAVS2523). Nucleic acid molecules encoding PDerp98-509 were isolated from a D. pteronyssius cDNA library by PDerp98-509 were isolated from a D. pteronyssius cDNA library by CC hybridisation with a probe encoding the D. farinae high molecular weight map (HWW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allerges via a skin cest. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as topose to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins. (Updated con 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mite allergen protein; map; high molecular weight; house dust mite; IgE; immunoglobulin E; allergen; may hypersensitivity reaction; therapy; treatment; diagr canine; veterinary; antibody; vaccine; immunisation.

                                                                                                                                                                                                                                                                                       Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANJ96314-AAJ96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Der HYM-map; American house dust mite; antiallergic; mite; IgE; mite allergenic protein; immunoglobulin E; hypersensitivity;

                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated mite allergenic protein of CD Dermatophagoides, designated Der HMW-map protein, and its related nucleic CD acid. The Der HMW-map protein is useful for eliciting an immune response CD against Der HMW-map protein. The protein or a reagent comprising a non-protein account spitope is useful for identifying an animal (e.g., dog, CD act) susceptible to or having an allergic response to a mite. A CD therapeutic composition is useful for desensitising a host animal to an CD allergic response to a mite. The DNA and protein can be used in the CD detection of anti-Der HMW-map antibodies in animal fluids, and inhibition CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies that bind to Der HMW-map are useful for inhibiting CD disease. Antibodies disease to mite allergens, and as vaccines CD against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (map) PDerf98-536, the mature form of pDerf98-555 (AAY52523). PDerf98-536
Chas a molecular weight of 98 kD, comprising 536 amino acids, and is a
component of the Dermatophagoides farinae high molecular weight mite
component of the Dermatophagoides farinae high molecular weight mite
component of the Dermatophagoides farinae high molecular weight mite
component of the Dermatophagoides farinae high molecular weight mite
composition of the presence of proteins that bound to IgE
present in mite-allergic dog antisera. Mite allergenic proteins and
peptides, and nucleic acids encoding them, may be used in therapeutic
compositions to modify an animal's hypersensitivity reaction to mite
compositions to modify an animal's hypersensitivity reaction to mite
compositions to modify an animal's hypersensitivity reaction to mite
compositions to modify an animal's hypersensitivity reaction to mite
composition and peptides and work or
composition as kin test. The proteins of ragments may also be used to diagnose
composition to mite
composition as which have a variety of potential uses. For example,
composition to mite allergens to passively immunise animals against dust
mite hypersensitivity, as positive controls in test kits and as tools to
control to mite and the proteins of proteins.

The Der HMW-map protein is useful for eliciting an immune response cagainst Der HMW-map protein. The protein or a reagent comprising a non-compressing expectation or a reagent comprising a non-compression or having an allergic response to a mite. A composition is useful for desensitising a host animal to an expectation composition is useful for desensitising a host animal to an expectation of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) E or Der HMW-map protein activity associated with a composition start bard to Der HMW-map are useful for inhibition of immunoglobulin (Ig) E or Der HMW-map are useful for inhibition complexes. Antibodies that bind to Der HMW-map are useful for inhibition complexes antibodies that bind to Der HMW-map are useful for inhibiting compositions to IgE, to prevent immunocomplex formation, thus cagainst mite allergen hypersensitivity. Sequences AAU96314-AAU96342 corepresent Der HMW-map polypeptides of the invention

The HMW-map composition was isolated from a D. farinae composition. The HMW-map composition was isolated from a D. farinae composition of proteins that bound to 192 present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a proteins and less for example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reducing hypersensitivity responses to mite allergens, and as vacciagainst mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New mite allergenic protein isolated from Dermatophagoides, designated Der HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 555 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 12; Page 114-116; 161pp; English.
